# Energy Saving Showerheads

## Save Water, Energy and Money

**KITTITAS PUD #1 offers free showerheads to qualifying households**

***KITTITAS PUD #1, in partnership with the Bonneville Power Administration, is pleased to offer free “low-flow” showerheads to members whose water is heated with an electric water heater. Simply fill out the form below and return it with your next payment.***

**Inexpensive and simple to install: low-flow showerheads can reduce your hot water consumption and water heating costs by as much as 50 percent. A low-flow showerhead delivers fewer gallons of water per minute but with the same pressure as a regular shower head. A family of three takes almost 1,000 showers per year! If each person takes a ten minute shower with a showerhead that uses 4 gallons of water per minute, the usage would be about 40,000**

**gallons. By replacing this showerhead with a low-flow model rated at 2 gallons per minute, the hot water use would be cut in half, saving 20,000 gallons a year. If this water is heated with an electric water heater, your yearly savings would be approximately \$175. Not only will you save money and energy, but also water, conserving another valuable resource.**

### Free Showerhead Offer

**Yes,** I want to conserve energy by installing a low flow showerhead! Please send me my free Energy Saving Showerhead(s).

**Yes, my water is heated with an electric water heater.\***

**Please send me (circle one): One showerhead / Two showerheads\*\***
